Education

Company hosted trainings of LLMs, Docker, and blue/green deployments

Microsoft C# 40 hr. Training 2024

Cloud computing gold certification
ATT's education center
Jan 2019

Data Analyst Nanodegree
ATT's education center 2020

Bachelor of Science, Computer Science
Lewis University, Romeoville, IL

Skills

Leadership: Resource Management, Project Management, Stakeholder Communication, Meeting Facilitation, Goal Setting, Data Analysis

Methodologies: Agile, SCRUM, CI/CD

Quality & Testing Tools: Jira, Confluence, TestRail, Testiny, ALM Quality Center, Postman, BrowserStack, PuTTY, Playwright, Cypress, Req n Roll, Bruno

Programming & Automation: Jenkins, Java, XML, Object-oriented design, .NET

Development: Rider, VS code, eclipse

Platforms & Databases: Windows, Unix, Windows Server, SQL, Oracle

Productivity & Analysis: Microsoft Word, Excel, Powerpoint, Outlook, Troubleshooting & Root Cause Analysis

Profile

Technical Quality & Delivery Lead with 12+ years of experience driving end-to-end software delivery across FinTech platforms. Proven track record of partnering with Product, Engineering, and DevOps teams to deliver high-quality releases on time. Strong background in Agile environments, CI/CD pipelines, and managing cross-functional workflows, release readiness, and production risk.

Experience

Payroc, **Senior QA engineer / Quality & Delivery Lead** | June 2020 – Present

- Led end-to-end delivery and quality strategy across multiple FinTech platforms, partnering with Product, Engineering, DevOps, and external stakeholders to ensure successful, on-time releases for systems supporting 10,000+ users.
- Owned the full QA lifecycle within the SDLC, contributing from requirement definition through development, testing, and production deployment
- Improved release efficiency and reduced production risk by implementing structured QA and delivery processes across teams and environments.
- Coordinated cross-functional teams across development, Product, DevOps, and vendors to support both monthly and Agile (2-week sprint) release cycles
- Owned delivery tracking via Jira, ensuring visibility into progress, risks, and blockers across teams
- Acted as key decision-maker for release readiness, including blocking high-risk deployments and escalating critical issues to ensure production stability
- Led validation and approval of 60–80 change requests annually, maintaining alignment between testing coverage, release timelines, and business requirements
- Partnered with stakeholders to refine requirements, improve user workflows, and ensure clarity and alignment prior to development and release
- Drove automation strategy across Dev, UAT, and production environments, achieving ~80% automation coverage and reducing release validation time by 30–45 minutes per deployment
- Supported zero-downtime data center migrations by coordinating test strategy, execution, and release validation across distributed systems
- Owned quality strategy across four applications with varying release cadences (monthly, bi-weekly, and maintenance), supporting both internal and external, revenue-impacting platforms
- Played a key role in implementing an AI-based data detection solution, preventing 300+ instances of sensitive data exposure in production
- Led onboarding and integration of multiple acquired platforms, translating business workflows into structured testing and delivery plans

AT&T | Jan 2008 - Jan 2020

Senior Specialist Application Developer, CAST Administrator - Dec 2010 – Jan 2020

- Founding member of CAST analysis team, responsible for onboarding 30+ applications initially, scaling to 230+ applications enterprise-wide
- Designed and maintained automation pipelines to ingest source code and databases and trigger analysis workflows.
- Implemented SCRUM process to help increase analysis cycles from 3x year to Bimonthly, while also reducing turnaround times over 70%

IT Analyst, Defect Manager - January 2009 – November 2010

- Led cross-functional testing and development teams to manage and resolve defects across production and pre-release versions of flagship TV and Internet platforms.

IT Analyst, requirements October 2008 – January 2009

- Gathered and validated requirements from third-party and internal stakeholders, translating them into maintained and traceable test cases aligned to releases

Associate IT Analyst, System tester January 2008 – October 2008

- Completed the MATREX college-hire program and executed high-volume functional and regression testing across multiple browsers and accessibility tools, identifying defects and validating fixes for production and future releases.
